

WhatsApp AI Agent

AI Agent for Automated Query Resolution and Customer Support

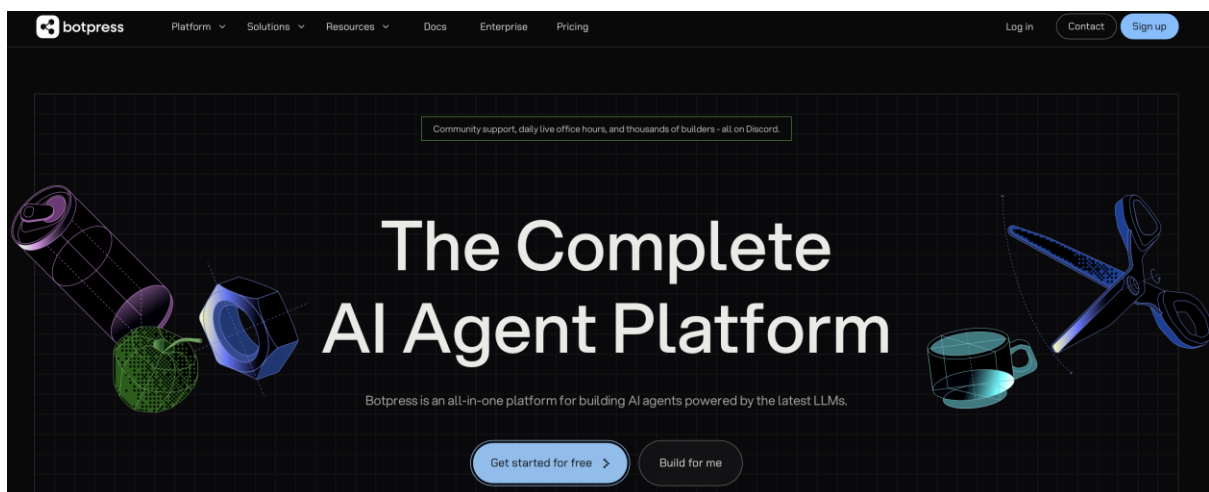

The AI agent is designed to intelligently respond to user queries by leveraging a pre-defined knowledge base, which can include documents, web pages, or any other structured or unstructured content. It begins by comprehensively reading and understanding the information provided within this knowledge base. Once trained on the source material, the agent is capable of delivering accurate and context-aware responses to user questions.

The system can be seamlessly integrated with communication platforms such as WhatsApp, where it listens to incoming queries in real time and generates appropriate responses. This makes it a highly effective solution for a range of use cases including:

- **Customer Support:** Instantly resolving customer queries without human intervention.
- **Troubleshooting Assistance:** Providing step-by-step guidance based on technical manuals or help documents.
- **Appointment Booking:** Managing scheduling and confirmations through conversational interaction.
- **General Query Handling:** Addressing FAQs and providing personalized responses.

By automating routine interactions and providing instant, reliable answers, the AI agent significantly enhances user experience, reduces operational costs, and improves efficiency across support and service channels.

Step-1: Visit the website <https://botpress.com>.

 Add Website

Whatever the sources that you want to provide as the knowledge source that the system would refer while answering the queries can be selected and provided here.

For example, I want to create the AI agent that would help answer queries about my experiences, skills, afflictions and availability for AI consultancy or corporate trainings. I am going to provide the documents such as my corporate training profile and the CV.

Step-6: Click Next to find the summary of the knowledge sources.

Test your agent on WhatsApp

Quickly test your agent in under **30 seconds**.
Ideal for development and demos.

— OR —

 **Connected** →

The system would ask for the **confirmation**, confirm it and then it would show you the QR code. Scan it and talk to your agent.

Follow these steps on your computer or mobile device

STEP 1 Scan the QR code with your phone's camera or go to:

<https://api.whatsapp.com/send?phon...>

STEP 2 Send the linking code:

76NEKH

STEP 3 Your agent is now ready to be tested on WhatsApp!

Say "Hi"
